Alternative Energy Sources Feb 03 2022 The search for alternative sources of energy is an attempt to solve two of the main problems facing the modern world. Today's resources are mainly based on fossil flammable substances such as coal, oil, and natural gas. The first problem is related to the expected and observed depletion of deposits, not only those available but also less accessible. Another is related to global warming from emissions of greenhouse gases (mainly carbon dioxide) as well as emissions of other pollutants in the atmosphere. Mitigating the harmful effects of fossil fuel use is an obvious challenge for mankind. This Special Issue includes articles on the search for new raw materials and new technologies for obtaining energy, such as those existing in nature, methane hydrates, biomass, etc., new more efficient technologies for generating electricity, as well as analyses of the possibilities and conditions of use of these resources for practical applications.

Downhole Steam Generator Using Low Pressure Fuel and Air Supply Jul 16 2020 An apparatus for generation of steam in a borehole for penetration into an earth formation wherein a spiral, tubular heat exchanger is used in the combustion chamber to isolate the combustion process from the water being superheated for conversion into steam. The isolation allows combustion of a relatively low pressure oxidant and fuel mixture for generating high enthalpy steam. The fuel is preheated by feedback of combustion gases from the top of the combustion chamber through a fuel preheater chamber. The hot exhaust gases of combustion at the bottom of the combustion chamber, after flowing over the heat exchanger enter an exhaust passage and pipe. The exhaust pipe is mounted inside the water supply line heating the water flowing into the heat exchanger. After being superheated in the heat exchanger, the water is ejected through an expansion nozzle and converts into steam prior to penetration into the earth formation. Pressure responsive doors are provided at a steam outlet downstream of the nozzle and close when the steam pressure is lost due to flameout.

Exhaust System Jan 14 2023 An exhaust system includes: an exhaust pipe defining an exhaust path of exhaust gas to atmosphere; a recirculation pipe defining a recirculation path separating a part of exhaust gas passing through the exhaust pipe and allowing the part to flow back to a power unit; a purification unit purifying exhaust gas by catalyst; and a heating device heating exhaust gas before purification to activate the purification ability of the

catalyst. The heating device includes: an acoustic-wave generator generating acoustic waves by absorbing heat from exhaust gas passing through the recirculation pipe and by giving the heat to working fluid to cause the working fluid to oscillate, and a heat transfer part transferring heat of exhaust gas in the exhaust pipe passing through a downstream position from the purification unit to exhaust gas in the exhaust pipe passing through an upstream position from the purification unit by using acoustic waves.

Carbon Monoxide Poisoning Sep 17 2020 While an ever-present and familiar toxin, carbon monoxide (CO) remains the number one poison in our environment. This silent killer is responsible for over 2,000 deaths a year in the United States alone. The public and healthcare communities need quality information about the many risks presented by carbon monoxide exposure. Edited by a leading expert in the field, Carbon Monoxide Poisoning delineates the successful means to prevent, identify, and manage the effects of CO poisoning. This volume explores new information on CO toxicity, including rehabilitation, the dissemination of information to the public, litigation involving CO poisoning, economic loss assessment, and firefighting.

A series of chapters detail the risk of CO poisoning from kitchen ranges, recreational vehicles, and power boats. Expert contributors survey diagnostic procedures and devices, incorporating advances in brain SPECT imaging and non-invasive pulse-oximetry. The book includes chapters that specifically address the pros and cons of hyperbaric oxygen therapy and thoroughly review the physiological effects of acute and long term exposure to CO, as well as the neurocognitive and neurobehavioral sequelae. Whether you are a healthcare professional who treats CO poisoning, a lawyer involved in litigation for loss of life or property due to CO poisoning, or an engineer developing a well-insulated structure with sufficient ventilation; you will face the challenges raised by CO toxicology. Offering the only comprehensive reference on the subject, this multi-faceted guide takes an innovative look at how we can identify, treat, and prevent harmful exposure to carbon monoxide.

A Little Strangeness in the Woods Aug 29 2021 In September 2020 NSA's Utah Data Center started red flagging email messages between several Federal and State agencies requesting confirmation of an active bio agent from the CDC. A Forest Service manager in Washington State notified the FBI concerning an explosive device attached to an active bio agent. The FBI signaled Homeland that an active weapon system of foreign origin had been found in the forest of Washington.

Architects' Data Jan 02 2022 Architects' Data An indispensable tool for the initial stages of designing and planning a building project This new edition of the classic bestselling text provides, in one concise volume, the essential information needed as the basis for the more detailed design and development of any building project. Organized largely by building type, it covers the planning criteria and considerations of function and location—and with over 6200 diagrams, it provides a mass of data on spatial requirements. Most of the featured illustrations are dimensioned and each building type includes plans, sections, site layouts and design details. The book also includes an extensive bibliography and detailed set of metric/imperial conversion tables. Architects' Data, 6th Edition starts with the basics of designing for a new building project, before moving on to covering everything an architect needs to know. It also looks at the design styles and specifications for creating different types of structures, such as those made for residential, commercial, religious, cultural, sports, medical and other types of occupation. Sixth English edition of the classic, international reference for architects Covers user requirements, planning criteria, basic dimensions, and considerations of function and siting Includes numerous examples and over 6200 illustrations and tables New in the Sixth Edition: Updated sections on lighting, stairs and lifts, energy performance certificates and fire protection New sections on electric charging stations, beekeeping and newsrooms, and tiny houses Additional sections on sustainable building materials added to relevant chapters Architects' Data is an excellent resource for architects, building surveyors, space planners, and design and building contractors everywhere.

Generators in development projects Aug 09 2022 Generators are an essential part of many projects and give rise to a very significant expenditure. This book introduces you to them from the management perspective. It is not about turning you into an electrician or a mechanic but about choosing the most suitable generator for your project and running it in the most economical way possible. You will learn how to improve existing installations, determine the power required, make informed choices between the different available options, oversee key aspects of the installation and avoid wasting energy that compromises the sustainability of the projects.
